PROFILE

Full Stack Developer with over 9 years of experience in creating scalable enterprise applications with C#, .NET Core, React, SQL Server, Azure Functions, and CI/CD.

I focus on optimizing modules and queries according to the needs of the company or project. I am creative, I adapt quickly to my team, and I enjoy challenges that allow me to grow and achieve good results. One of my main passions is to keep learning to reach my goals.

WORK EXPERIENCE

punto.dev/Solution
External Consultant

Bolivia (Híbrido)
November 2025 – Today

I worked as a freelancer for several businesses and as an external consultant. I was in charge of the full development of web applications, server deployment, and process automation.

- I worked as an external consultant for **YPFB Refinación**. I did maintenance and improvements for these systems:

SAVI (Trip Assignment System):

I changed some modules at the client's request. I also added new modules to improve the view and generate better reports. I also added a chatbot on my own, so users can search faster and get better information about the system. I also added WhatsApp messages and reminders for each request.

SILOG (Integrated Logistics System):

I changed some modules at the client's request. I also added new modules to improve the view and show better reports.

- I developed a web application for appointment management at Thiara Arte Dental Clinic. It includes an interactive calendar, automatic WhatsApp reminders, and an admin panel. I used Next.js, Node.js, PostgreSQL, and Docker for deployment.

You can open the link below to see the application:

<https://admin-odontothiara-ui.vercel.app/>

- I developed a web application for sales management for La Cocina de Yhosua Restaurant. It has a shopping cart, inventory control, and a control panel for the business. I made the project with Next.js, TypeScript, .NET Core 8, and SQL Server.

You can open the link below to see the application:

<https://restaurant-web-murex-eight.vercel.app/login>

- I developed a web application for sales management for the chicken restaurant Sabor a Leña. The system included an admin dashboard to see daily sales, best-selling products, and order history. It also allowed managing inventory, registering new sales, and generating daily reports. The whole system had an easy-to-use control panel for the business owners. I made this with React.js, JavaScript, .NET Core 5, and SQL Server.

Technologies used:

Languages and Frameworks: C Sharp, NET Core 8, Blazor, DevExpress, Bootstrap, Clean Architecture con Microservicios

Databases: SQL Server, Triggers, Stored Procedures, T-SQL, Optimización de Consultas

Version Control and Management: Git, Jira
Infrastructure and Tools: IIS, Postman

Yacimientos Petrolíferos Fiscales Bolivianos
Full Stack Developer

Bolivia (On-Site)
October 2024 – June 2025

I have contributed to the improvement of internal **HR systems**, where I updated the vacation module to enhance the employee experience.

- Responsible for the implementation of the Vacation Module, which included:
Development of an interactive calendar so employees could check their scheduled or requested vacations, integrating tracking of late arrivals and early departures, and leave requests.
- Optimization and **bug fixing** of the Pegasus system, where I solved more than **25 issues**.
- I used **Docker containers** to deploy the module. This helped keep the same setup in **development, testing, and production**. I also set up automatic **pipelines** with **Jenkins** and **GitHub** to build the code.
- I made **SQL Server** queries faster. I used different **kinds of indexes** like **cluster, non-cluster, and columnstore** to speed up the queries.

Technologies used:

Languages and Frameworks: Java, Grails, Laravel.

Databases: PostgreSQL, Triggers, Index Management, cluster, non-cluster, columnstore.

Infrastructure and Deployment: Docker, CI/CD Pipeline, Jenkins.

Version Control and Quality: Git, SonarQube.

Project Management: Jira

Banco Ganadero
Software Developer

Bolivia (On-Site)
October 2021 – July 2024

I participated in the development of financial solutions with special attention to automation, system optimization, and secure data exchange. My work contributed to reducing processing times and improving production monitoring.

- I created a solution with **React.js** and **.NET Core 8** to process up to 20,000 electronic invoices with a single click, reducing processing time from weeks to minutes. For the frontend, I configured the development environment with **Webpack** to optimize **React** bundles.
- I developed an API in Node.js using **GraphQL** to query and manage transaction information for the company Farmacorp.
- I developed a **microservice** to process real-time card validations. **OAuth authentication** between systems and data encryption with public and private keys were also implemented to comply with financial standards.
- I developed a **microservice** in **Spring Boot** using **OOP** principles with **REST API** endpoints and **OAuth 2.0** security to process deposits from the Central Bank of Bolivia into Banco Ganadero accounts.
- I also put the **microservices** inside **Docker** containers so they worked the same in every environment. I set up automatic **pipelines** with **Jenkins** and **GitHub** so every change was tested and deployed to **Azure** by itself. We also checked the code with **SonarQube**, which helped us reduce repeated code and improve the project analysis to 80%. I also set up basic monitoring with **Azure Logs** and alerts to catch problems before users saw them.

Technologies used:

Languages and Frameworks: C Sharp, NET Core 8, ASP.NET Core, Worker Services, Node.js, NestJS, React.js, JavaScript, TypeScript, Spring Boot, Bootstrap, Tailwind

Databases, APIs and Protocols: Oracle, Triggers, Cosmos DB, MongoDB, Liquibase, GraphQL, API REST, OAuth, OAuth 2.0

Tools, Testing and Messaging: Webpack, NPM, NUnit, xUnit, Moq, Jest, RabbitMQ, Redis

Infrastructure and Deployment: Docker, Git, SonarQube, CI/CD Pipeline, Jenkins, IIS, Microsoft Azure, Azure
Methodologies: Scrum

Banco Mercantil Santa Cruz
Systems Analyst - Renew

Bolivia (On-Site)
April 2018 - October 2021

I worked on critical projects related to the migration of the bank's core system and **ATM** operations. My contributions focused on maintaining service continuity, **developing automation tools**, and improving the accuracy and efficiency of internal processes.

- I was part of the team responsible for the core banking migration, ensuring the continuous operation of **ATMs** and **optimizing processes for queries, transactions, and statements**.
- I led the management of more than **150 ATM** error codes, developing an application in MVC and Oracle that automated testing (JMeter-like), generating detailed Excel reports and improving result accuracy by 90%.

Technologies used:

Languages and Frameworks: NET, MVC, Angular, JDeveloper

Databases: Oracle, Triggers

Protocols and Standards: ISO8583, XML, SOAP Services

Testing Tools: JMeter

Modeling and Design: Enterprise Architect

Infraestructura: IIS

Version Control: TFS (Team Foundation Server)

Office Tools: Excel

Banco Nacional de Bolivia
Digital Solutions Development Analyst

Bolivia (On-Site)
April 2017 - October 2017

I focused on data processing, creating dashboards, and developing custom **services** to improve efficiency and decision-making through real-time information.

- I designed and developed an interactive **dashboard** for visualization and analysis of banking transactions, using **Power BI** for dynamic report creation and integrating statistical analysis with R to extract relevant data.
- I created a parameterizable **Windows Service** in **C#** and **Entity Framework** to process more than **10 TXT file formats**, transferring information to the **database** in an automated and scheduled daily manner.

Technologies used:

Languages and Frameworks: NET, C Sharp, MVC, Angular, Entity Framework

Databases: SQL Server, Stored Procedures, Triggers, Data Modeling, SSIS

Services and Tools: Windows Services, IIS, Query Optimization

Business Intelligence: Power BI, R

Version Control: TFS (Team Foundation Server)

Banco de Crédito y Creminex - BCP
Technical Analyst III

Bolivia (On-Site)
March 2015 - April 2017

As part of the development team, I contributed to the creation and improvement of digital banking solutions for various applications. My role focused on **backend** development, **database** optimization, and web application design to improve the performance and scalability of critical systems.

- I implemented the **API** for the **Yape app** (Play Store), using an orchestrator architecture in **C# and SQL Server**, which enabled scalability and efficient exception handling for **transactions, payments**, and **banking queries**.
- I designed an administrative web system in **MVC** for the **BCP Bolivia app**, managing key parameters such as transaction limits, active services, and enabled banks.
- I optimized complex **database** queries, significantly reducing execution times and improving data retrieval efficiency.
- I developed a web solution in **MVC4** for ticket management in the **Tus Beneficios app**, allowing bulk upload of up to **50,000** records from **Excel** files.

Technologies used:

Languages and Frameworks: C Sharp, NET, MVC4, Razor, ASP.NET, Windows Forms, Entity Framework, LINQ, Lambda Expressions

Databases: SQL Server, MSSQL, Stored Procedures, Functions, Triggers, SSIS

Services and APIs: REST Services, SOAP Services, Windows Services, SoapUI

Web Development: HTML, CSS, jQuery, JavaScript, Bootstrap

Version Control: TFS (Team Foundation Server)

Architectures: Service Orientation, Orchestrator Pattern, MVC Pattern

SKILLS

Backend: C# | ASP.NET | .NET Core | LINQ | Lambda Expressions | Entity Framework | Java | Grails | Spring Boot | Python | Flask | Node.js | NestJS | REST APIs | SOAP Services | GraphQL | JWT | OAuth | Azure Functions | RabbitMQ | Redis | Microservices Architecture.

Frontend: Blazor | WPF | Windows Forms | React | Next.js | Angular (JS-18) | HTML/CSS | JavaScript | TypeScript | Bootstrap (3-5) | Tailwind | Material UI.

Databases: SQL Server (Stored Procedures, Data Modeling) | SSIS | Oracle | MySQL | PostgreSQL | MongoDB | Cosmos DB | Firebase | Query Optimization | Index Management.

Cloud Technologies: Microsoft Azure (App Services, Functions, Storage) | Virtual Machines | IIS | Docker | Kubernetes | CI/CD Pipelines | Azure DevOps | Jenkins | Git | GitHub | Webpack | SonarQube.

Testing: xUnit | NUnit | MSTest | JUnit 5 | TestNG | Jest | Jasmine | Mock | Mockito | Integration Testing | Unit Testing.

Software Architecture: MVC | Layered Architecture | Monolithic | Microservices | Clean Architecture | Orchestrator Pattern | Service Orientation | Domain-Driven Design.

Data Analytics & Visualization: Power BI | Python (Pandas, NumPy) | R | Statistical Analysis | Data Modeling | Excel (Advanced) | Reporting Tools.

Tools & Protocols: Postman | SoapUI | Jira | Crystal Reports | DevExpress | JSON | XML | ISO8583 | OAuth 2.0 | TFS (Team Foundation Server) | Enterprise Architect | JMeter.

EDUCATION

Universidad Mayor de San Andrés (UMSA), Bolivia

Bachelor of Science in Computer Science – 2020-09

Certification Python – CISCO

2026-01 / Hoy

B1 – Englishland

2025-02 / Hoy

CERTIFICATES

Bachiller en Humanidades

Mantenimiento y Reparación de Computadoras

XVIII Congreso nacional de ciencias de la computación

Globalización de la información y la Tecnología

Planificación en la Educación Superior

La evaluación en el proceso de enseñanza y aprendizaje

Investigación acción participativa en el aula
Didáctica en la educación superior
Ley de telecomunicaciones

Udemy

Build a TodoList with NestJS TypeORM and Ionic Vue
Cloud Computing
React de cero a experto (Hooks y MERN)
SQL SERVER desde cero

Openwebinars

Construye objetos variables y constantes con Lombok
Curso Crea un API Rest con Node JS y Express: Endpoint con Rest
Curso Crea un API Rest con Node JS y Express: JWT y ficheros
Curso de anotaciones Lombok orientadas a objetos
Curso de anotaciones Lombok para Constructores, Equals y Hash code
Curso de desarrollo de una API REST con Spring Boot
Curso de elementos avanzados en tu API REST con Spring Boot
Curso de HTML5 y CSS3
Curso de Introducción a Lombok: Primeras anotaciones
Curso de JavaScript intermedio
Fundamentos de la industria del desarrollo de Videojuegos

Platzi

Curso de java Spring Security: Autenticación y Seguridad Web
Curso de Java Spring
Curso de Angular: Unit Testing para Servicios
Curso de Java Spring Data JPA: Base de Datos
Curso de Clean Code y Buenas Prácticas con Javascript
Curso de Autenticación con Angular
Introducción a la Administración de Servidores
Ingles Intermedio B1

Código Facilito

Curso profesional de C++
Curso de fundamentos de arquitectura de software

LANGUAGES

Spanish: Nativo

English:
